Basics (05)

GREP, SED, User

& Groups

Commands

GREP (Global Regular Expression Print):

Used to search for specific words or pattern and when it finds, it shows to user the occurrence of the word/words in the file.

1. Command use to search for specific word:

➤ `grep [word] [filename]`

exp:

➤ `grep Waseem file1`

2. Command used to avoid case sensitivity in search:

➤ `grep [word] [filename] -i`

exp:

➤ `grep Waseem file1 -i`

3. Command used to avoid the line/lines which include the word:

➤ `grep [word] [file1] -v`

exp:

➤ `grep Waseem file1 -v`

4. Command use to count number of occurrences of word in a file:

➤ `grep [word] [filename] -c`

exp:

➤ `grep Waseem file1 -c`

5. Command use to search for multiple words in a file:

➤ `grep ['word\'|word2\'|word3\'|'] [filename]`

exp:

➤ `grep 'waseem\'|khan\'|Dawar'`

Note: we can perform multiple commands on one by adding '|' symbol among the commands. Normally we use it for commands that the first command used as input for the next command.

exp:

➤ `cat ifconfig | grep inet`

SED (Stream Editor):

A Stream editor is a command-line utility that allows user to edit and transform text stream.

in simple words used to replace a word.

1.command used to replace a single word:

➤ sed 's/word1/word2' [filename]

exp:

➤ sed 's/Waseem/khan' waseem

2.command used to replace multiple words:

➤ sed 's/word1/word2;/s/word3/word4' [filename]

exp:

➤ sed 's/waseem/khan;s/Windows/Linux' waseem

3.Command use to replace a line:

➤ sed 'c3 [type here message]' waseem

exp:

➤ sed 'c3 After this we will teach AWS' waseem

4.command use to print specific number of lines:

➤ sed -n '[starting line number],[ending line number]'

exp:

➤ sed -n '5,15p' waseem

5.command use to print specific line:

➤ `sed -n '[Specific number]' waseem`

exp:

➤ `sed -n '4p' waseem`

Note: User can also use the stream editor inside a text editor such as nano or vim/vi and can replace the words by the below commands.

6.commands to replace a word inside a text editor (vim/vi):

➤ `:%s/word1/word2/`

exp:

➤ `:%/waseem/khan/`

7.command use to replace the words which are repeated:

➤ `:%s/word1/word2/g`

exp:

➤ `:%/waseem/khan/g`

User and Groups:

1.Command to create new user:

➤ `sudo adduser [username]`

exp:

➤ `sudo adduser waseem`

2.command to add password to the user:

➤ sudo passwd [username]

exp:

➤ sudo passwd waseem

3.command to create a group:

➤ sudo addgroup [group name]

exp:

➤ sudo addgroup Security

4.command to list users:

any of the following command will give you the group and user information:

➤ sudo cat/etc/passwd

➤ sudo getent group //make user to be in root user for this command

5.command to delete a user:

➤ sudo deluser [username]

exp:

➤ sudo deluser waseem

6.command to delete a group:

➤ `sudo delgroup [groupname]`

exp:

➤ `sudo delgroup Security`
